

**DESCRIPTION**

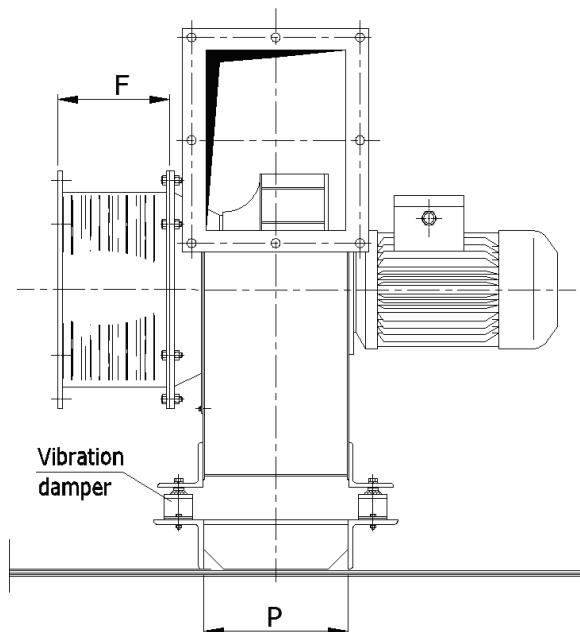

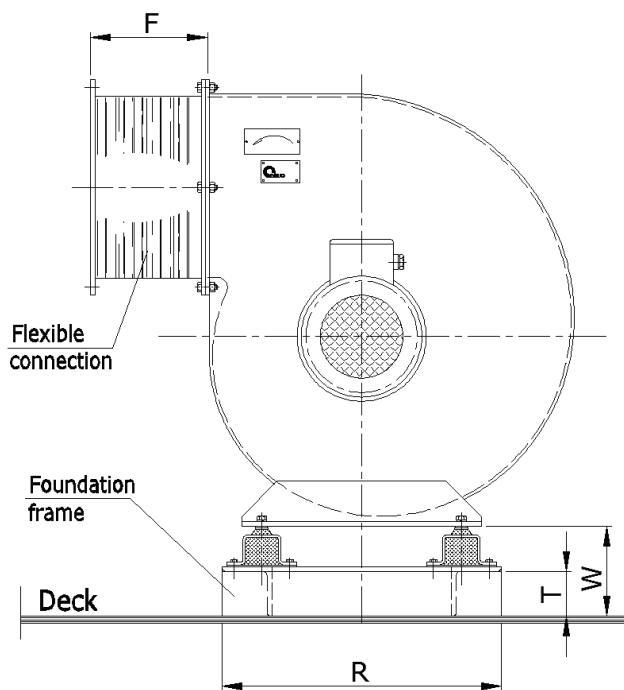

Resilient mounts of centrifugal fans WPM outfitted with flanged motors – design B5 significantly reduces the transmission of vibrations and structure-born noise generated by fans installed in ships ventilation systems. Consists of steel framing for welding to steel deck and a set of vibration dampers. Performance and number of dampers are selected individually in dependence of total weight of fan to be associated, as well as speed of fan's impeller. Fan inlet and outlet are provided with flexible joints made of non-combustible material and sealed with rubber gaskets. Surface treatment: painted with marine epoxy paint SWA 7423-014-250.

Ship structure in way of installation of fan to be suitably stiffened. Plane of foundation frame to be positioned horizontally.
