

DESCRIPTION

The NDS noise damping fan socket is destined for installation in ventilation systems of seagoing ships and offshore objects. They may be used as fire closure of main ventilation inlets and outlets as per SOLAS regulations, having also a function of attenuation of the fan generated noise. The NDS sockets consist of steel flanged casing and rotary steel flap of thickness corresponding to requirements of regulations. Shaft bearings provided with greasing nipples, maintenance-free bearings on request. Lever for manual control with locking pin with chain. Sockets are lined inside with sound-absorbing mineral wool, covered with perforated, galvanized steel sheet. Sockets may be supplied with the pre-mounted limit switches for remote indication of flap open-closed position. Steel components of sockets are hot-dip galvanized. Painted with set of marine paints on request.

MARKING

Example: NDS fan socket of nominal diameter DN=500: NDS-500

DIMENSIONS
