

**DESCRIPTION**

Under-roof, air-conditioning air coolers are designed for refrigerant air-conditioning installations when temperature of evaporation  $t_0$  is over 0°C. The coolers are built of double batteries of fins evaporator Cu-Al with changing fin pitch 3mm on pipes diameter 10mm. The evaporator is cased in galvanized steel plate lacquered or acid-proof plate. A silent-running fans guarantee air flow to 6m for each side. All units are equipped with fluid separator. The units are adapted to be supplied by refrigerant through thermostatic expansion valve with outer equalization of pressure. Every cooler is tested for leaks. After the test the cooler is dried and filled up with a neutral gas. **The coolers can be executed in glycol version.**
